EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science with Specialization in Data Science and Analytics

Scholarships: Jose P. Rizal Academic Scholarship (Full-Ride); EO-Ayala Skolar Grant

Cumulative QPI: 3.76

Quezon City, Philippines

Expected May 2028

Puerto Galera National High School - Main Campus

Science, Technology, Engineering, and Mathematics Strand

Honors: Class Valedictorian (Highest Honors); 8th of 3,050, CSE National Math Challenge

Leadership: President, Supreme Secondary Learner Government; Editor-in-Chief, School Publication

Puerto Galera, Oriental Mindoro

May 2024

EXPERIENCE

Freelance Web Developer

Metro Manila, Philippines

Independent Contractor

Jan 2026 – Present

- Building **Garage 559** (AKEA × Max Orido Philippines), a performance-parts catalog on Next.js, TypeScript, Cloudflare Workers, and Supabase, implementing scroll-triggered reveals with native CSS and IntersectionObserver rather than third-party animation libraries
- Delivered **aceandco.org** for an accounting services firm on the Next.js App Router with React Server Components, achieving perfect **100** Lighthouse scores in Performance, SEO, and Best Practices (98 on mobile)
- Scoped engagements directly with clients, turning non-technical requests into defined deliverables and timelines

PROJECTS

Pokémon Card Market Analysis

github.com/RokiTheWise/pokemon-card-market-analysis

Lead Data Analyst

July 2026

- Analyzed **23,314** monthly price observations across **540** cards and **49** sets (2021–2025) in Tableau, showing a reported **+37.46%** median gain was a **composition effect**: the same cohort through 2024 was down **22.84%**, with **60%** of cards below entry price
- Quantified the grading premium across price tiers, finding the multiplier collapses from **4.3×** under \$10 to **1.2×** above \$50, and derived a **\$125** raw-price break-even below which grading fees exceed expected value
- Built an 11-sheet workbook filterable by year, set, card, and artist; anchored returns to each card's first nonzero listing so \$0 placeholders could not silently drop the dataset's highest-value card, and verified every calculated field independently in pandas

LogiSketch | Boolean Equation Visualizer

logisketch.djenriquez.dev

Sole Developer

Jan 2026 – Feb 2026

- Engineered a reactive logic system in Next.js with a top-down recursive descent evaluator synchronizing Boolean equations against truth tables and functionally complete NAND/NOR circuits
- Implemented the **Quine-McCluskey** algorithm for automated Boolean reduction, deriving minimal Sum-of-Products forms to reduce hardware gate count at **100%** truth-table fidelity

Aklatang Galera

aklatang-galera.djenriquez.dev

Sole Developer

Feb 2026 – Mar 2026

- Architected a bilingual civic portal in Next.js and Supabase consolidating **100+** educational, livelihood, and government resources into one dashboard with an integrated Semantic Scholar research engine
- Optimized for mobile-first accessibility, reaching Lighthouse Performance of **100** desktop / **98** mobile and **100** SEO on both; launched to the Puerto Galera community, driving **170+** engagements and **50+** shares in three days

PBA Finals Player Radar Comparison

github.com/RokiTheWise/PBA-Player-Radar-Statistic

Sole Developer

July 2026

- Built an interactive player-comparison tool in pandas and matplotlib over a hand-assembled PBA Finals box-score dataset, cleaning leaked separator rows, an inconsistent MINS format, and uneven per-player game counts
- Normalized **8** performance metrics against the full player pool rather than only the two players selected, preventing weaker performers from appearing artificially competitive and keeping comparisons honest league-wide

SKILLS

Programming Languages: Python, TypeScript, Java, JavaScript (ES6+), SQL

Frameworks & Libraries: React, Next.js, Node.js, Django, Tailwind CSS

Data & Analytics: pandas, matplotlib, Tableau

Tools & Platforms: Git, Supabase, Cloudflare Workers, Vercel, Vite, Excel, PowerPoint
